EDUCATION

Balıkesir Üniversitesi - Balıkesir, Turkey

2020-2024 Computer Engineering 2.80/ 4.00

Özlüce Anadolu Lisesi - Bursa, Turkey

2016-2020 Science & Mathematics 4.50/ 5.00

SKILLS

Technical & Soft Skill

- Software Development
- Machine Learning
- Cloud Computing
- Data Structures & Algorithms
- Computer Vision

Softwares/Tools

- Python, Java, C#
- Swift
- SQL, MongoDB
- HTML, CSS, JavaScript, React
- Google Cloud
- Git
- TensorFlow, PyTorch

Languages

- English : B2
- German : A1
- Turkish : Native

WORK EXPERIENCE

Alp Aviation, Eskisehir-Turkey

It Intern 08/2024 – 09/2024

- I developed a Full Stack Task Management System using React for the front end and Node.js with Express.js for the back end.
- I designed an OCR program for reading serial numbers to use in the factory.

Innomobil Bilişim Teknolojileri San. Tic. Ltd. Şti. , Bursa-Turkey

Software Engineering Intern 06/2023 – 10/2023

- I was part of the BioRobotec bionic robot project which was a finalist in the 2023 Teknofest Entrepreneurship Competition. In this project, I worked on image processing, artificial intelligence, modeling and Arduino, further enhancing my skills.

PROJECTS

Crime Detection with Image Processing : The project detects criminals among the people registered in the system using image processing with OpenCV library.

Bionic Robot (TEKNOFEST 2023 Fınalist): We have developed a robot that can imitate the movements of the person in front of it . Techniques and Technology used: Opencv for image processing, Arduino for controlling servo motors

Task Management System: React for the frontend, Node.js and Express.js for the backend, and MongoDB as the database.

E-Commerce: A user interface with React.js while providing a solid backend infrastructure with Node.js.

Catch The Eric: A simple whack-a-mole style iOS game where the user taps on a randomly appearing image "Eric" within a time limit to increase their score. The app tracks the current score, a countdown timer, and saves the high score using UserDefaults.

Art Book Project: A simple Core Data-based painting list app where users can add, view, and delete paintings. It displays the painting names in a table view and navigates to a detail screen when a row is tapped.

Currency Converter : A simple currency converter app that fetches real-time exchange rates from the Fixer API. When the user taps the button, it retrieves and displays rates for USD, CAD, CHF, GBP, JPY, and TRY using JSON parsing and URLSession.

OCR : Automatically extract printed text, handwriting, and data from any document with intelligent document processing

Altair: An application that encrypts files and decrypts them with a key.

Road Line Detection : Technologies Used:

Python: Programming language used for development.
OpenCV: Library used for computer vision tasks such as image processing and detection.
NumPy: Library used for numerical computations in Python.

CERTIFICATES

- 2025 Swift ile iOS Programlama
- 2024 React Js: Uygulamalı React Js - Redux Eğitimi
- 2024 Cisco: Siber Güvenliğe Giriş
- 2023 Python OpenCV ile Görüntü İşleme
- 2023 Full Stack Web Tasarım ve Programlama
- 2023 Teknofest Girişim Yarışması Finalist Sertifikası
- 2022 Blender Temelleri
- 2020 Python İleri Seviye Programlama
